Top frame with blind and bottom frame

Side frame x2

Frame clips x4 (minimum – heavier blinds may require more)

Tension device

1 Corner Joints

Slot one side frame into the bottom frame, making sure to line up the five small holes at the corners. Screw into position. Repeat with the other side frame.

2 The Frame

Position the top frame onto the side frames, slotting into place and aligning. Fix each side frame with the screws.

3 The Tension Device

Pull the tension apart – it will split into two pieces.

4 The Tension Device

Place the first piece onto the frame at the required drop, fixing into place with screws.

5 The Tension Device

Loop the blind chain under the device, then reattach the second piece by pressing firmly. This will secure the blind chain.

6 The Tension Device

You can now screw the two pieces of the tension device together and cover the screw with the plastic cap.

7 The Brackets

Measure 85mm from the bottom corner of the frame up the side panel. You can do this by resting a credit card on the frame. Line up the frame clip and the top of the credit card, then slot the clip into place, pushing it into the seal against the glass. Repeat this process for the other three corners.

For ease of insertion, you can use a lubricant, such as washing up liquid, on the base of each frame clip.

8 Fixing in Place

Once the four frame clips are fixed into place, carefully slot the blind onto the clips, pressing firmly until you hear a clicking sound.

Babies and young children can be strangled by loops in pull cords, chains, tapes and the inner cords that operate the product. To avoid strangulation and entanglement, keep cords out of the reach of young children. Move beds, cots and furniture away from window covering cords. Do not tie cords together. Make sure cords do not twist and create a loop.

The assembly and installation of this product can be completed by non-professionals, in accordance with current trade and safety standards. Please consult a professional if you are in doubt.
